EDUCATION

Dalian University of Technology (2013.7-2017.6)

Liaoning, China

Bachelor of Mechanical Design manufacture and Automation

- GPA: Major **90.7/100.0**
- Rank: **2/64**
- Top Grade Scholarship (5%), twice, 2013-2014 & 2014-2015

Harbin Institute of Technology (2017.9-2024.6)

Heilongjiang, China

Ph.D. candidate, Mechanical Engineering

- Research Topic: **Imitation Learning; Robot Skill Learning; Optimal Control; Riemannian Geometry**

Idiap Research Institute (2021.2-2022.8)

Martigny, Switzerland

Research Intern

- Research Topic: **Optimal Control; Riemannian Geometry**

Shenyang Institute of Automation, Chinese Academy of Sciences (2024.8-present)

Shenyang, China

Assistant Researcher

- Research Topic: Research on Precise Manipulation in Manufacturing

Project List

Research on Human-Like Behavior Learning Methods for Industrial Precision Manipulation Tasks

Project Leader

Jul. 2025-Jun. 2027

- This project focuses on the theme of "human-like behavior learning methods for industrial precision operation tasks";
- This research addresses three major challenging issues in current industrial intelligent operations: "poor demonstration feature extraction," "low operation action accuracy," and "weak rigid-flexible adaptive capability.";
- It delves into the following aspects: studying motion feature extraction and representation reconstruction based on motion primitives, investigating motion optimization traversal strategies based on multi-modal information fusion, and exploring human-like adaptive stiffness models using Gaussian motion primitives;
- Simulation and experimental validation will be conducted across various task scenarios.

Support by Liaoning Provincial Natural Science Foundation Doctoral Startup Project

Research on Efficient Learning Methods of Robot Precision Operation for Industrial Flexible Production Tasks

Project Leader

Nov. 2024-Nov. 2027

- This project focuses on the theme of robotic autonomous operation for flexible production tasks, addressing three challenging issues: "poor demonstration feature extraction," "low operational action accuracy," and "weak rigid-flexible adaptive capability."
- Involving in-depth research on motion feature extraction and representation reconstruction based on the motion primitives method;
- Development of motion optimization traversal strategies based on multimodal information fusion;
- Study of variable stiffness interaction models based on the Gaussian motion primitives method;
- Simulation and experimental validation will be conducted across various task scenarios.

Support by Fundamental Research Project of Shenyang Institute of Automation (SIA) (Grant No. 2024JC1K03)

Research on Human-Robot Collaboration Technology and Application for Aerospace Manufacturing

Project Participant

Sep. 2022-Jun. 2024

- Employ GMM-GMR method to characterize human demonstration skills and extract the motion feature;
- Propose a dynamic constraint DMPs method to achieve the generalization of peg-in-hole assembly skills under variable initial conditions, which can achieve flexible assembly with high and low stiffness peg, and the accuracy is 0.3mm;
- Based on the above strategy, a multi-information fusion assembly skills learning system is proposed, which makes it easy for non-professionals to complete the human-robot assembly skills transfer.

Funded by Major Research Plan, National Nature Science Foundation of China (Grant No. 92048301)

--PhD project and main research.

Efficient Human-Machine Collaboration and Intelligent Planning Technology Based on Multiple Operational Modes

Project Participant

Nov. 2022-Jun. 2024

- Robot can perform in a variety of operating modes (collaborative, local autonomous) based on the proposed admittance controller. The surgeon can freely drag the robot arm to the desired surgical position and autonomously switch between passive

and active operating modes according to the proposed pattern recognition method.

Funded by National Key Research and Development Program of China (Grant No. 2022YFB4700701)

Learning by Switching Roles in Physical Human-Robot Collaboration

Project Participant

Feb. 2022-Sep. 2022

- Extract the demonstration feature using multiple types of coordinate systems (Cartesian/Cylindrical/Spherical);
- Propose a framework based on Riemannian geometry and (i)LQR method for online planning and robustness to human disturbances;
- Based on the proposed framework to achieve grasping, box-opening skills learning, and collaborative grasping tasks under man-robot shared control.

Funded by the Swiss National Science Foundation SWITCH project (<https://switch-project.github.io/>)

--Visiting PhD project

Memory of Motion

Project Participant

Feb. 2021-Feb. 2022

- Employ an ADMM-iLQR strategy to solve an OCP considering tool affordance constraints in impact-aware tasks;
- Introduce a maximum directional manipulability cost in the optimal control framework to optimize the grasping and final manipulation posture;
- Make a comprehensive comparison of different approaches to measuring manipulability in directional tasks.

Funded by European Commission's Horizon 2020 Programme Memory of Motion, <https://www.memmo-project.eu/>, Grant Agreement 780684

--Visiting PhD project

Fundamental Researches on Cooperative Dual-Arm Mobile Robot

Project Participant

Sep. 2017-Sep. 2022

- Construct a model between the feature parameters of demonstration and the task parameters by MV-GPR method, which improves the ability of motion imitation and generalization;
- Propose a DMPs method based on Euclidean transformation to generalize the point-to-point motion and writing and wiping motion from any initial state.

Funded by Major Research Plan, National Nature Science Foundation of China (Grant No. 91648201)

--PhD project and main research

Automatic Grinding Platform Based on Laser Cleaning

Project Participant

May. 2019-Sep. 2021

- Build the communication links PC between SIMENS PLC, MiYi range sensor and KUKA KR6
- Design the upper computer software to control the automatic grinding platform

Funded by Shanghai space research institute

Robot technology and system for minimally invasive knee replacement surgery

Project Participant

Dec. 2017-Nov. 2020

- Propose a sequential planning strategy based on LQR method for sequential point-to-point task;
- By applying the proposed sequential planning strategy to the motion planning of the key parts of the knee joint, the flexible connection of the pre-cut points can be realized at the level of surgical planning.

Funded by National Key Research and Development Program of China (Grant No. 2017YFB1303001)

Ant Colony Algorithm in the Mobile Robot Path Planning Simulation Research

Project Leader

Dec. 2016-Jun. 2017

- Propose an optimization algorithm of ant colony algorithm to speed up the stochastic search for the optimal path
- Propose an adaptive parameter optimization and correction strategy to improve the planning path
- Built the simulation platform using MATLAB/GUI for planning the optimal path and export the planning file

2019 JCAR Cup Inclusive Robot Industrial Application College Invitational Tournament

Team Leader

May. 2019-Aug. 2019

- Build the simulation grasping platform in Gazebo and complete the grasping task
- Complete the task of the physical platform to grasp the specified fruit from the stacked objects

AWARDS and SCHOLORSHIPS

<i>HIWIN Scholarship</i>	<i>(Twice) 2013-2015</i>
<i>Learning Excellence Award (First Prize)</i>	<i>(Twice) 2013-2015</i>
<i>Three-Good Students of Dalian University of Technology</i>	<i>(Twice) 2013-2015</i>
<i>Technology Innovation Award of Dalian University of Technology</i>	<i>2013-2014</i>
<i>Excellent Graduate of Dalian University of Technology</i>	<i>2016-2017</i>
<i>National Scholarship</i>	<i>2017</i>
<i>China Scholarship Council (CSC) Scholarship</i>	<i>2021-2022</i>

SKILLS

- Computer Skills:
 - Python, MATLAB, C, C#.
 - ROS, Gazebo, MATLAB, PyCharm, Visual Studio, AutoCAD, SolidWorks.
 - Latex, Word, PowerPoint, Excel, Visio.
- Language Skills:
 - Chinese (Native), English (Fluent), Japanese (Some knowledge of) and French (Learning)

LANGUAGE PROFICIENCY

- College English Test Band 6 (CET6): **499/710** (Listening: 170, Reading: 191, Writing and Translating: 138)
- Japanese Language Proficiency Test (N2): **104/180** (Reading: 38, Listening: 32, Language Knowledge: 34)
